DETAILED ACTION

1. The amendment filed on 4/30/2003 is entered. The rejection of claim 27 is maintained.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claim 27 is rejected under 35 U.S.C. 102(b) as being anticipated by Neukermans et al (US 5,629,790).

As to claim 27, Neukermans et al teach a scanner which includes a primary mirror 82 that moves through a predetermined scan path at a selected scan rate having a scanning period that defined a scanning frequency; and a resonant reflector 85 aligned to the scanning mirror 82 and being of a type that moves resonantly through a movement path at a resonant frequency, wherein the scanning frequency is a integral multiple of the resonant frequency wherein the resonant reflector 85 is a microelectromechanical membrane and wherein the movement path includes deformation of the membrane (see figures 1c and 5a, column 3, lines 30-64 and column 8, lines 34-67).

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claim 27 is rejected under 35 U.S.C. 103(a) as being unpatentable over McClelland et al (US 6,201,629) in view of Swartz et al (US 6,102,294).

As to claim 27, McClelland et al teach a scanner which includes a primary mirror 3 that moves through a predetermined scan path at a selected scan rate having a scanning period that defined a scanning frequency; and a resonant reflector 31 aligned to the scanning mirror 3 and being of a type that moves resonantly through a movement path at a resonant frequency, wherein the scanning frequency is a integral multiple of the resonant frequency (see figures 1 and 8D, column 8, lines 51-58 and column 11, lines 20-41).

McClelland et al fail to teach a related scanner which includes a microelectromechanical membrane having deformation of the membrane. However, Swartz et al teach a scanner which includes deformable mirror 150 (figure 11A, column 7, lines 8-10). It would have been obvious to a person of ordinary skill in the art at the time of the invention to utilize the deformable mirror 150 taught by Swartz et al for the mirror disclosed in the scanner of McClelland because this would improve miniaturized, increased flexibility bar code scanner, while fabricating mirror simpler at low cost (column 1, lines 39-46 of Swartz et al).

Response to Arguments

6. Applicant's arguments with respect to claim 27 have been considered but are moot in view of the new ground(s) of rejection.
